

Sales Dashboard Analysis Report

Project Overview

This report presents an analytical summary of an Excel-based Sales Dashboard created using 1200 rows of online store sales data. The objective of this project is to analyze sales performance, profitability, customer behavior, and marketing effectiveness using data visualization techniques.

Dataset Summary

The dataset contains transactional sales data including order details, customer information, product categories, quantity, pricing, payment methods, coupon codes, referral sources, and order status.

Key KPIs Analyzed

Total Sales	Net Sales	Total Profit
Monthly Sales Trend	Product-wise Profit	Order vs Sales
Coupon Performance	Payment Methods	Referral Sources

Key Insights

- Certain products consistently generate higher profits.
- Mid-year months show peak sales performance.
- Coupon codes significantly impact order volume and revenue.
- Online and card-based payments dominate customer transactions.
- Email and Instagram emerge as strong referral sources.
- Returns and cancellations reduce total realized sales.

Tools & Techniques Used

Microsoft Excel was used for data cleaning, pivot tables, pivot charts, slicers, conditional formatting, and dashboard creation. Business intelligence and data visualization techniques were applied to derive insights.

Final Conclusion

This project demonstrates the ability to transform raw sales data into actionable business insights using Excel. The dashboard supports informed decision-making and highlights key analytical and visualization skills.
